

Interwoven Delivers Proven Scalability

Beats Documentum 50:1 in Price Performance

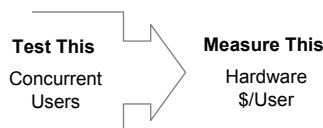

TechBrief
021217-01-B-2.1

1 Overview

The Interwoven® 5 platform delivers unmatched scalability for our customers. Results from testing at Sun® prove it. Your portal, document, learning, government, and many other business critical functions are supported by technologies stemming from our investment in research and development.

2 Metrics

The most straightforward means to measure scalability is on dollars spent per user to sustain a set number of concurrent users. This metric allows you to track actual hardware dollars spent to maintain your enterprise content management system.

Poor scalability can be cleverly disguised behind equipment with more processors, and offloading some services to servers like databases or file system caching.

3 The Numbers

Interwoven and Documentum® have both been in the Sun® labs testing our servers for performance on Solaris™. The analysis is simple and the results are amazing. We added up the hardware costs from both studies. The results are shown in the table.

- The highest number of users on a single machine that Documentum cites is 620. Interwoven has gracefully achieved 2500.
- The lowest cost per user comes from Interwoven at \$20/user. Documentum costs over \$1000/user for a similar configuration.

		
Concurrent Users	Hardware \$/User	
	Interwoven	Documentum
100		\$562/User
210		\$334/User
330		\$761/User
700/620	\$20/User	\$1050/User
1300	\$46/User	
2100	\$188/User	
2500	\$223/User	

*Sun benchmarks. Interwoven December 2001, Documentum July 2002.

All other content management vendors are notably absent. No one else has run benchmark tests or tuned their platforms.

4 Conclusion

Using the highly scalable Interwoven 5 server, you can design a horizontal solution as it fits your business. We've found that most system architectures actually map horizontal solutions against organizational boundaries, configuring servers taking into account user administration, backup solutions, project domains, and other considerations.

Consolidated 40
intranet servers into
1 TeamSite server

15 warehouses managed across 15
branches from
1 TeamSite server

Managing 46 extranets
on
1 TeamSite server
